Three promises to guarantee performance meeting ICH guideline for stability testing

*C Equipped with options.*
Accelerated testing at a more severe storage condition than ICH guideline, 40°C ±1°C/75%rh ±1%rh is possible.

Frost-free refrigeration for continuous operation

One of remote assistance features, alarm notification via email for faster recovery
Area Temperature and Humidity Control System

An area temperature and humidity control system allows positioning of temperature sensors as desired. Control is performed to correct for deviation from the setting temperature due to the test area size and ambient temperature, which means highly accurate temperature and humidity control within the test area. (CWH)

±1°C/±5%rh guaranteed
Supports severe storage conditions of ±1°C/±5%rh (CSH-HG, CWH)

Viewing window
The viewing window on the door comes with a heat element, to prevent it from fogging.

Door Lock
A door lock protects against loss of specimens and ensures security.
Full-view inner glass door

Full-view inner glass door is equipped as standard. (CSH)
It lets you easily check on samples without temperature and humidity fluctuation that caused by opening and closing the outer door.

Vacuum Insulation

HG model stability test chamber is the first in the environment test chamber industry to adopt vacuum insulation, which reduces the effect of ambient temperature.

Temperature and humidity recording and monitoring

A temperature and humidity detection terminal is equipped as standard.
A connector that provides simple connection and disconnection is equipped as an accessory.
Variety of volumes

Three types of content are available: 235L, 470L, and 794L.

Virtual Air Jacket System

A new developed Virtual Air Jacket system makes it possible to maintain uniform temperature and humidity distribution within the chamber. Air blown from below circulates along the chamber walls for stable airflow that is not affected by specimen volume, etc. Storage conditions stipulated by ICH guidelines are maintained, regardless of the position in which specimens are located (within effective dimensions).

Air flow (Virtual Air Jacket)

Smooth specimen access

Sliding shelves are used to allow easy access to specimens. Shelves can be pulled out to one-half of their depth. When heavy specimens such as liquids are placed on the shelves, a fall-prevention mechanism keeps them from being pulled out when slid forward. (Equally distributed load per shelf is 30 kg)

Installation space

Saving space

Due to low exhaust heat design, it is not required space between the back of the chamber and the wall. The electric circuits and refrigeration circuit are consolidated in the front of the door and the bottom of the chamber to minimize the chamber's width.

Easy maintenance

Maintenance work such as cleaning the condenser fins and filling the water tank can be easily operated.
**±1°C±5%rh guaranteed**
All models fulfill the stability requirements of the Long Term Storage Testing and Intermediate Testing. The CSH-SG also conforms to more demanding Accelerated Testing stability requirements.

**Reliable temperature and humidity sensor**
A high-accuracy resistance temperature detector (Pt100) is used for the temperature sensor, and a capacitive thin-film polymer sensor is used for the humidity sensor. You are free from wet-bulb wick replacement in dry-bulb systems and the effects of microorganisms that have become attached to the wick.

**Saving energy**
The CSH-132, a newly developed large capacity type, can be used with the same power consumption as the CSH-122, which is expected to hold down running costs during long-term usage. The maximum load current has been reduced 36% compared to previous model.

**Frost-free, continuous operation**
Evaporator frosting is prevented to allow continuous operation without interrupting test.

---

### Storage conditions in ICH stability testing guidelines

<table>
<thead>
<tr>
<th>Test types</th>
<th>Storage conditions</th>
<th>Minimum testing period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long term storage testing</td>
<td>25°C±2°C/60%rh±5%rh or 30°C±2°C/65%rh±5%rh</td>
<td>12 months</td>
</tr>
<tr>
<td>Intermediate testing</td>
<td>30°C±2°C/65%rh±5%rh</td>
<td>6 months</td>
</tr>
<tr>
<td>Accelerated testing*</td>
<td>40°C±2°C/75%rh±5%rh</td>

</tr>
</tbody>
</table>

---

### Temperature and humidity distribution measurement data (CSH)

Nine points in the effective space of the test area are measured. (Performance shown above conforms to IEC)

**Temperature**
- Set point: +40°C

**Humidity**
- Set point: 75%rh

---

### Power consumption comparison

---

---
• **±1°C/±5%rh guaranteed**
  Accelerated testing at a more severe storage condition than ICH guideline, 40°C ±1°C/75%rh ±1%rh is possible.

• **Double refrigerator circuit for reliable design**
  Two independent refrigerator circuits are provided to ensure that operation continues even should one circuit experience problems. Those can be used alternately, which contributes to longer overall refrigerator circuit service life. The result is a system with built-in risk management.

• **Area Temperature and Humidity Control System (Japanese patent No.6258110)**
  An area temperature and humidity control system allows positioning of temperature sensors as desired. Control is performed to correct for deviation from the setting temperature due to the test area size and ambient temperature, which means highly accurate temperature and humidity control within the test area.

• **Clean humidifier**
  The growth of bacteria is suppressed with a structure that maintains a high humidifying water temperature. The humidifier is also easier to clean.
Easy-to-use instrumentation

Unlike the smartphones, the controller comes with resistive touchscreen, which allows you to operate without taking off your gloves. Various items, including operation settings and chamber setup, can be selected with the tabs at the bottom of the screen.

Absolute temperature/humidity limit alarm

This chamber is equipped with a standard function to transmit an alarm when a process value has deviated from the temperature/humidity set points. The temperature/humidity allowable range and temperature/humidity stability time can also be registered as desired. Registering the ICH stability testing guideline standards of ±2°C/±5%rh allows a rapid response when problems occur.

Email alert

When an alarm is triggered, an e-mail is sent to the registered PC or mobile address. A notification can also be sent at the time of test completion.

* Requires an intranet environment capable of sending emails.

Email alert

Name: N-instrumentation P-200

Operating modes: Constant, program, stop

Operation settings:
- Constant mode setup:
  - No. of setting types: 3
  - Setting range and resolution: Temperature: lowest attainable temperature -5°C to highest attainable temperature +5°C in 0.1°C increments
  - Humidity: 0%rh to 100%rh in 1%rh increments
- Program setup:
  - No. of setting types: 1 (12 steps)
  - Setting range and resolution: Temperature: lowest attainable temperature -5°C to highest attainable temperature +5°C in 0.1°C increments
  - Humidity: 0%rh to 100%rh in 1%rh increments
  - Time: 0 hour 1 minute to 9999 hours 59 minutes in 1 minute increments

External memory function:
- Interface: Conforming to USB 2.0 (Connector A type)
- Supported device: Flash memory of USB Mass Storage Class (supporting up to 32 GB)
- Supported functions:
  - Set Graph data Writing
  - Read/Write Program Pattern (PC application: Pattern manager lite)
  - Write Back Trace Data

Web function:
- Interface: Ethernet port (100base-TX)
- Server functions: Remote monitor (Web application: WEB Manager)
- Supported browsers:
  - Windows Internet Explorer 10

*1 The performance values are based on IEC 60068-3-6:2001.  
Performance figures are given for a +5°C to +35°C ambient temperature, relative humidity 65±20%rh, rated power supply and no specimens inside the test area.

*2 Temperature and humidity maximum and minimum range means maximum difference after stabilization, at any moment in time in the working space against the setting values; ambient temperature of +5 to +32°C, no load, no specimen.

*3 Excluding protrusions.

At the lower left
For CSH-132/CSH-112

To prevent damage in the event of water leakage when installing the following optional products, a dew tray (sold separately) and other preventive measures can be prepared.

- Continuous water supply
- Water purifier

**Direct water coupling to tap water**

A water circuit to supply pure water continuously to the chamber.

- Pure water coupling with pressure-reducing valve
- Pure water coupling without pressure-reducing valve

**Water purifier (reverse osmosis)**

Use to continuously supply pure water.

- **WS-1**
  - Produced water capacity: 12 L/h
  - Size: W480 × H400 × D280 mm

**Power supply voltage**

- 220 V AC 1ø 2 W 50/60 Hz
- 230 V AC 1ø 2 W 50 Hz

**Paperless recorder**

A temperature & humidity recorder that utilizes a liquid-crystal display fitted with a touch-panel.

- Display: 5.7 inch color touch panel
- Scan interval: 5 sec. (default)
- Internal recording media: Flash memory 8MB
- Memory slot: Compact flash ×1, USB ×1
- Inputs: Temperature ×1, Humidity ×1

**Recorder location**

At the lower left

* External dimensions change when attaching the recorder at the left or right side.
  (Please refer to the recorder location.)

**Dimensions**

Left side

Right side

Lower left

**Recorder backup**

In case of power failure, power is supplied to the temperature/humidity recorder and humidity sensor, and test area temperature/humidity is recorded.

- Recharge time: 12 h
- Backup time: 40 min.

**Thermocouple**

Attached to specimen to measure its temperature.

- Thermocouple with a brass ball tip
- Thermocouple type T (Copper/Copper-Nickel)
  - 2 m
  - 4 m
  - 6 m

**Anchoring fixtures**

Used to fix the chamber to the floor.

**Chamber dew tray**

Prevents water leaks from the chamber onto the floor.

**Operation manual**

- CD
- Booklet

**Reports & certificates**

- Testing and inspection report
- Test data
- Temperature & humidity uniformity measurement
- Calibration results
- Calibration certificate
- Traceability certificate
- Traceability system chart
- Validation service*

- Humidifier water level detection
- Water tank drought switch
- Area temperature burn-out circuit (with built-in temperature/humidity controller)
- Water tank low-level switch
- External device error detection

---

**Safety precautions**

- Do not use specimens which are explosive or inflammable, or which contain such substances. To do so could be hazardous, as this may lead to fire or explosion.
- Do not place corrosive substances in the chamber. If corrosive substances are generated by the specimen, the life of the chamber may be significantly shortened specifically because of the corrosion of stainless steel and copper and because of the deterioration of resin and silicon.
- Do not place life forms or substances that exceed allowable heat generation.
- Be sure to read the operation manual before operation.
Recommended products

Bench-Top Type Temperature (& Humidity) Chamber

- Compact design for personal use, it is optimal for reliability and efficacy evaluation tests under various temperature and humidity conditions. It can be controlled in a wide range from −60 to 180°C/30 to 95% rh. Variations available in 2 sizes, 2 temperature ranges (−40°C or −60°C), and with or without humidity control in the range of 30 to 95% rh. All models come with a touch-panel programmable controller to program your test profile.

- Equipped with casters, you can use the stand (option) to arrange your equipment and save space by stacking chambers and moving them whenever necessary.
